Dr. Fanase Chal

Bhoi Galli, Yeola

Nasik Dist-423401

My baby Ms.Vishakha was generally a healthy child till 3.9.04. But in the morning of 04.09.04 between 2 – 3 AM she had a severe pain and suddenly there was bleeding from her nose. She vomited between 4 – 5 AM.

So we got her admitted in Hospital where doctor said, her blood platelet count is just 3000/cu.mm. After treatment for one month platelet count increased but very soon it decreased. What to do was the question?

Then our brother Dr.D.D.Shirsath suggested us to start taking Indian Noni. After having consumed 2 bottles, from 26,000/cu.mm her blood platelet count went to 2,30,000/cu.mm. From that day onward, she is normal and happy. Indian Noni is like a boon to us.
