One and half years ago Polymyositis disease struck me. I was a Noni user before this disease attacked me.

Actually, according to doctors, people who suffer from this disease are bed ridden or on wheel chair with acute pain and no existing medicines except high dosage of steroids can help give some solace as so far no cure has been found for this disease.

Since I was a Noni user before this disease struck me, I was saved from being bed ridden and from the excruciating pain.

The doctors to whom I visited were astonished to see me so active.

My test report on C K level in Blood were 2400.

Normal level is 200.

Now it is 1192.

Since I am a Noni user, I never got any pain, nor I was bedridden any time and the doctors after doing a thorough examination said I need not take any medicines. I carry on with Noni and I am positive that I will come out of this disease very soon.
